2. For extremely porous block: Prime with a coat of MasterSeal HLM 5000 diluted up to 25% with MasterSeal 990 or xylene. Or apply a parge coat of MasterSeal 581 at the rate of approximately 400 ft² (37.2 m²) per bag and allow to cure a minimum of 7 days before applying MasterSeal HLM 5000.
3. Remove dust, dirt and other contaminants just before or during application. Surfaces must be dry at the time of application.
4. Air-void pockmarks or honeycombs must be opened up to allow MasterSeal HLM 5000 to fill the cavities completely. Air entrapment within voids may cause blisters. Extreme cases may require additional repair.

PRESTRIPING

1. Before applying the final membrane, all joints, cracks and openings around protrusions must be sealed by caulking or prestripping (a preliminary coating of MasterSeal HLM 5000 applied with a trowel or stiff-bristled brush). Allow to dry overnight before applying final membrane.
2. When the final membrane is applied, the overall thickness over joints and cracks, at coves and around penetrations should be approximately 100 wet mils (2.5 mm) on the standard system.

STATIC JOINTS AND CRACKS

Joints and cracks less than 1/8" (1.6 mm) should be filled by prestripping. Apply material so it both fills and overlaps the joint or crack to a width of 4" (102 mm) on each side.

WORKING OR EXPANSION JOINTS

All joints over 1/8" (3 mm) must be sealed with a Master Builders Solutions urethane sealant. Any working joint less than 1/8" (3 mm) should be routed to a minimum of 1/4" (6 mm) and filled with a sealant. Prevent the waterproofing membrane from adhering to the joint sealant, which could cause sealant or membrane failure, by applying a coat of wax or bond breaker tape over the cured sealant and then prestripping.

UNCOATED METAL SURFACES

Remove dust, debris, and any other contaminants from vent, drain pipe and post penetrations, reglets and other metal surfaces. Clean surfaces to near white per SSPC-NACE2 and prime immediately with MasterSeal P 173. Provide appropriate cant with MasterSeal NP 1™ or NP 2™ sealants to eliminate 90° angles.

VENT, DRAIN PIPE, AND POST PENETRATIONS

Clean metal surfaces to bright metal and prime with a quality rust-inhibiting metal primer followed by MasterSeal P 173 or P 176. Remove dust, debris and any other contaminants from voids. Seal with the appropriate sealant.

APPLICATION

A test application is always recommended before proceeding with entire application.

NOTE: Finish coat must be applied in a pinhole-free, continuous membrane for waterproofing integrity.

STANDARD SYSTEM

1. Select the grade of MasterSeal HLM 5000 that best meets individual job requirements. Use MasterSeal HLM 5000 T for trowel application, MasterSeal HLM 5000 S for spray application, MasterSeal HLM 5000 R for roller application or MasterSeal HLM 5000 SL for squeegee application.
2. For horizontal applications, empty contents of pail and spread immediately to ensure workability. Best results are obtained by marking off 125 ft² (11.61 m²) areas and evenly spreading the contents of a 5 gallon (18.93 L) unit with a rubber-edged notched squeegee. Repeat the above procedure until the entire surface is covered.
3. For vertical applications, apply by trowel, roller or spray at the rate of 25 ft²/gallon (0.6 m²/L). Best results are obtained by marking off 125 ft² (11.6 m²/L) and evenly applying the contents of a 5 gallon (18.93 L) pail.
4. Verify the applied thickness with a wet mil gauge as the work progresses.
5. The integrity of the cured membrane on a horizontal surface may be verified by damming the entire area and flooding with water to a minimum depth of 2" (51 mm) and allowing the water to stand for 24–48 hours. Visually inspect the bottom surface to check for any water penetration. If repairs are necessary, the area should be drained and allowed to dry before reapplying MasterSeal HLM 5000. After reapplication, the area should be tested again for membrane integrity.

HIGH-BUILD SYSTEM

Concrete application: Apply 60 wet mils of MasterSeal HLM 5000, followed by setting MasterSeal 995 reinforcing fabric into the wet material. Overlap all seams a minimum of 3" (76 mm). Additional material may be required to properly embed the reinforcing fabric where it overlaps. Allow the first coat to cure overnight and follow with a second 60 wet-mil application of MasterSeal HLM 5000.

Plywood application: All plywood construction must comply with APA (American Plywood Association) standards. Caulk all joints with a Master Builders Solutions sealant and then proceed with the MasterSeal HLM 5000 high-build system.

SPRAY EQUIPMENT

For spray equipment recommendations, consult the equipment manufacturer.

CURING

Appreciable properties develop within 24–48 hours at 75°F (24°C) and 50% relative humidity. Protect MasterSeal HLM 5000 from traffic during curing.

DRAINAGE AND PROTECTION

1. For protection during backfill and where hydrostatic pressure is anticipated, use the appropriate MasterSeal 975 Drain Board System for installation instructions.
2. For protection during backfill only, install protection board as soon as possible following cure of MasterSeal HLM 5000.

CLEAN UP

Clean all tools and equipment immediately after application with MasterSeal 990.

HOW TO APPLY MASTERSEAL 977

SURFACE PREPARATION

1. Waterproofing membranes must be protected against tear, puncture, and other abuses during placement of concrete wearing slabs and reinforcing steel. They should also be protected from jobsite traffic and backfilling operations.
2. All specifications calling for membrane waterproofing should also require protection of membrane as an integral part of the overall waterproofing system.

Technical Data Guide
MasterSeal® HLM 5000

APPLICATION

Install overlapping MasterSeal 977 protection board as soon as possible following cure of the liquid membrane. Protect MasterSeal HLM 5000 from traffic before placement of protection board. MasterSeal HLM 5000 must be cured before installation of any topping.

FOR BEST PERFORMANCE

MASTERSEAL HLM 5000

- Apply MasterSeal HLM 5000 when substrates are dry and air temperatures are 40 to 90°F (4 to 32°C); for application at temperatures below 40°F (4°C), consult Technical Services.
- Temperatures influence viscosity and handling characteristics of MasterSeal HLM 5000: heat increases and cold decreases the flow. Keep MasterSeal HLM 5000 cool in hot weather and warm in cold weather.
- Avoid application when inclement weather is present or imminent.
- Do not apply to reinforcing bars or to wet or contaminated surfaces.
- Do not directly heat containers with flame, stove, hot plate or oven.
- Patch all voids and deep depressions in substrates with appropriate patching material before applying MasterSeal HLM 5000.
- Use MasterSeal 550 under thin-set tile applications.
- Before applying MasterSeal HLM 5000, dam all drains and drain openings.
- Carefully work material over irregular concrete to avoid pinholes and holidays.
- Protect MasterSeal HLM 5000 coated surfaces from puncture with protection board until required topping or backfill is placed.
- Not intended as an exposed or wearing surface.
- Do not use where a solvent odor is objectionable, e.g., near areas where food preparation or processing occur during the application.
- Specify wet or paper curing for concrete to be coated with MasterSeal HLM 5000; avoid using liquid curing compounds.
- In horizontal applications concrete must be slopped to drain to avoid ponding water on the surface of MasterSeal HLM 5000
- When using drainage mat directly over MasterSeal HLM 5000, a layer of 6 mil polyethylene sheeting should be used between the MasterSeal HLM 5000 and the drainage mat.

MASTERSEAL 977

- Store MasterSeal 977 on a flat surface and keep it dry; do not remove shrink wrap until immediately before use.
- If board is exposed to prolonged periods of water immersion or excessive humidity, it may curl or wrinkle.
- MasterSeal 977 to be covered with a concrete wearing course must be securely attached to membrane.

GENERAL

- Proper application is the responsibility of the user. Field visits by BASF personnel are for the purpose of making technical recommendations only and not for supervising or providing quality control on the jobsite.

HOW TO APPLY

SURFACE PREPARATION

1. Masonry surfaces must be sound, clean, dry and free of all paint, grease, oil, dirt and foreign matter.
2. Concrete surfaces must be fully cured and free of laitance, moisture or form oils.
3. Where necessary, clean joint surfaces by grinding, sandblasting or mechanical abrading; remove dust, dirt and loose particles before priming.
4. Metal-edged joint surfaces must be clean and free of all rust, oil and dirt.

APPLICATION

Do not apply to backer rod

MASTERSEAL P 173

1. Apply MasterSeal P 173 to the cleaned joint surfaces by brushing on a thin, uniform coat. Use primer as is; do not thin. Too much primer may act as a bond breaker.
2. Allow primer to dry tack-free before applying sealant. Dry time will vary depending on temperature and humidity.
3. Sealant must be applied the same day as primer.

MASTERSEAL P 176
30 minutes to 8 hours, depending on temperature and humidity, (60 minutes at 72° F [22° C] and 50% relative humidity). MasterSeal P 176 will be tacky to the touch but will not transfer to the finger when dry.

CLEAN UP

Brushes and tools may be cleaned with MasterSeal 990 before primer has dried. Dried primer must be removed by abrading.

FOR BEST PERFORMANCE

- Substrates such as copper, stainless and galvanized steel typically require the use of a primer, MasterSeal P 173 or MasterSeal P 176 is acceptable. For Kynar 500-based coatings, use MasterSeal P 173 only. An adhesion test is recommended for any other questionable substrate.
- Be careful to apply MasterSeal P 173 only to joint faces; MasterSeal P 173 will darken upon UV exposure.
- Proper application is the responsibility of the user. Field visits by BASF personnel are for the purpose of making technical recommendations only and not for supervising or providing quality control on the jobsite.
